Глава 1

Список задач

```
Подпрограмма md_neighbours::find_neighbour_distances (nl, atoms, group1, group2, box)
Сделать sqrt(dr2) быстрее.
Модуль md_read_write
Добавить чтение файла настроек.
```

2 Список задач

Глава 2

Указатель модулей

2.1 Указатель модулей

Аннотированный списокмодулей:

cut_off_function
cut off poly 1
fit gr moire
graphene on surface analysis
graphenenorm
ifport
Заглушка для удобства компиляции. В IFPORT находится функция rand() при компиляции с ifort. При компиляции с gfortran такого модуля нет. Этот пустой модуль нужен чтобы не убирать use IFPORT в md_general при компиляции с gfortran
lennardjones
lennardjones_1g
lennardjonescosine
md_general 3
md_integrators
md interactions
$\mathrm{md}_{-}\mathrm{neighbours}$
Модуль содержит подпрограммы относящиеся к спискам соседей частиц (
md_read_write
Модуль ввода вывода .хуг файлов и настроек моделирования
md_simulation
morsecosine
perfomance_settings
Модуль настройки OpenMP параллелизма
rebosolidcarbon
rosatoguillopelegrand
tersoffbrenner

5.13 Модуль md_neighbours

Модуль содержит подпрограммы относящиеся к спискам соседей частиц

Функции/подпрограммы

• subroutine create neighbour list (nl)

Инициализирует пустой список соседей.

• subroutine update_neighbour_list (md_step, nl, atoms, group1, group2, box, exe_time_nlsearch, exe_time_nldistance)

Вычисляет расстояния между соседями. Обновляет список соседей с нужной частотой. Расстояния между соседями вычисляются всегда. Список соседей обнавляется с периодом указанным в списке. Также замеряется затраченное время.

• subroutine find neighbours (nl, atoms, group1, group2, box)

Ищет соседей для частиц из первой группы среди второй группы. Группы могут совпадать.

• subroutine find_neighbour_distances (nl, atoms, group1, group2, box)

Пересчитывает взаимное расположение соседей.

• subroutine converce neighbour list (cnl, group2, nl)

Делает список соседей для второй группы из списка соседей для первой группы. Эквивалентно find_neighbours(cnl,atoms,group2,group1,box). Обращенный список соседей заполняется данными из списка полученного подпрогаммой find neighbours(nl,atoms,group1,group2,box)

5.13.1 Подробное описание

Модуль содержит подпрограммы относящиеся к спискам соседей частиц

5.13.2 Функции/подпрограммы

Делает список соседей для второй группы из списка соседей для первой группы. Эквивалентно find_neighbours(cnl,atoms,group2,group1,box). Обращенный список соседей заполняется данными из списка полученного подпрогаммой find neighbours(nl,atoms,group1,group2,box)

5.14 Модуль md read write

Модуль ввода вывода .хуг файлов и настроек моделирования.

Функции/подпрограммы

• subroutine read integrator params (integr, file id)

Читает параметры интегратора.

• subroutine read box size (box, filename)

Читает параметры моделируемой ячейки в файле .xyz. Читает второю строку в xyz файле. В размер ячейки задается тремя векторами. В общем случае ячейка триклинная.

• subroutine read particles (atoms, filename)

Читает информацию о частицах из .xyz файла. Первая строка файла содержит количество частиц. Третья и последующие - координаты по $X,\,Y,\,Z,\,$ скорости по $X,\,Y,\,Z,\,$ массу и название частицы. Всего 8 столбцов для каждой частицы.

• subroutine write particle group (filename, atoms, group, box)

Выводит информацию о группе частиц в новый файл.

 $\bullet \ \ subroutine \ \ write_particle_group_append \ (filename, \ atoms, \ group, \ box, \ md_step)$

Выводит информацию о группе частиц в конец уже имеющегося файла.

5.14.1 Подробное описание

Модуль ввода вывода .хуг файлов и настроек моделирования.

Необходимо сделать Добавить чтение файла настроек.

5.14.2 Функции/подпрограммы

Читает параметры моделируемой ячейки в файле .xyz. Читает второю строку в xyz файле. В размер ячейки задается тремя векторами. В общем случае ячейка триклинная.

Предупреждения

Данная подпрограмма (как и вся программа) рассчитана только на прямоугольные ячейки.

5.17 Модуль perfomance settings

Модуль настройки OpenMP параллелизма.

Функции/подпрограммы

• subroutine set_openmp_perfomance (num_of_omp_treads, N)

Настраивает количество OpenMP потоков и omp_chunk_size.

Переменные

• integer omp_chunk_size

Массивы данных будут разбиваться на части длины omp_chunk_size при использовании omp
parallel for schedule(dynamic ,omp_chunk_size)

5.17.1 Подробное описание

Модуль настройки OpenMP параллелизма.

Предупреждения

omp chunk size пока нигде не используется.

5.17.2 Функции/подпрограммы

Hастраивает количество OpenMP потоков и omp_chunk_size.

Аргументы

$num_of_omp_treads$	Количество OpenMP потоков
n	Количество частиц в моделируемой системе

См. определение в файле perfomance_settings.f90 строка 14

5.17.3 Переменные

```
5.17.3.1 omp_chunk_size
```

integer perfomance settings::omp chunk size

Maccивы данных будут разбиваться на части длины omp_chunk_size при использовании omp parallel for schedule(dynamic ,omp_chunk_size)

См. определение в файле perfomance settings.f90 строка 8

```
8 \ integer:: omp\_chunk\_size

- pure subroutine md general::find distance (dr, dr2, vec1, vec2, box)

7.15 Файл MOLECULAR_DYNAMICS/md_integrators.f90

Группы

• module md integrators

Функции/подпрограммы

- subroutine md integrators::integrate verlet xyz positions (atoms, group, steps, box)
- subroutine md_integrators::integrate_verlet_z_positions (atoms, group, steps, box)
- subroutine md integrators::integrate verlet xyz velocities (atoms, group, steps)
- subroutine md integrators::integrate verlet z velocities (atoms, group, steps)
- subroutine md integrators::molecular static xyz velocities (atoms, group)
- subroutine md integrators::molecular static 1d velocities (atoms, group)
- subroutine md integrators::zero forces (atoms, group)
- subroutine md integrators::create nose hoover chain (nhc)
- subroutine md integrators::set nose hoover chain (nhc, temp, q1, l)
- subroutine md integrators::integrate nose hoover chain (nhc, atoms, group, dt)
- subroutine md_integrators::calculate_nose_hoover_chain_energy (nhc)

7.16 Файл MOLECULAR DYNAMICS/md interactions.f90

Типы данных

- type md interactions::interaction parameters
- type md interactions::interaction

Группы

• module md interactions

Функции/подпрограммы

- subroutine md interactions::create groups (groups, file id, out id, atoms)
- subroutine md_interactions::create_interactions (interactions, groups, file_id, out_id, input_ ← path)
- subroutine md_interactions::update_interactions_neighbour_lists (md_step, interactions, atoms, groups, cell, exe_time_nlsearch, exe_time_nldistance)
- subroutine md_interactions::allocate_graphene_norm (interactions)
- subroutine md interactions::update norm in graphene (interactions)
- subroutine md_interactions::calculate_forces (atoms, interactions)
- subroutine md interactions::energy (inter name, e, nl, p)
- subroutine md interactions::calculate potential energies (interactions)
- subroutine md interactions::calculate forces numerically (atoms, interactions)
- subroutine md interactions::create truncated nl (tnl, nl)
- subroutine md interactions::destroy truncated nl (tnl)
- subroutine md interactions::calculate truncated nl (tnl, nl, i, n)
- subroutine md interactions::shift drs (tnl, inl, k, nl n, dx)
- subroutine md_interactions::shift_gr_norm (gr_norm, nl_nn, inl, k, dx)
- subroutine md interactions::nlists load (out id, interactions)

7.17 Файл MOLECULAR DYNAMICS/md neighbours.f90

Группы

• module md neighbours

Модуль содержит подпрограммы относящиеся к спискам соседей частиц

Функции/подпрограммы

• subroutine md neighbours::create neighbour list (nl)

Инициализирует пустой список соседей.

• subroutine md_neighbours::update_neighbour_list (md_step, nl, atoms, group1, group2, box, exe time nlsearch, exe time nldistance)

Вычисляет расстояния между соседями. Обновляет список соседей с нужной частотой. Расстояния между соседями вычисляются всегда. Список соседей обнавляется с периодом указанным в списке. Также замеряется затраченное время.

• subroutine md_neighbours::find_neighbours (nl, atoms, group1, group2, box)

Ищет соседей для частиц из первой группы среди второй группы. Группы могут совпадать.

• subroutine md neighbours::find neighbour distances (nl, atoms, group1, group2, box)

Пересчитывает взаимное расположение соседей.

• subroutine md neighbours::converce neighbour list (cnl, group2, nl)

Делает список соседей для второй группы из списка соседей для первой группы. Эквивалентно find_neighbours(cnl,atoms,group2,group1,box). Обращенный список соседей заполняется данными из списка полученного подпрогаммой find neighbours(nl,atoms,group1,group2,box)

122 Файлы

7.18 Файл MOLECULAR DYNAMICS/md read write.f90

Группы

• module md read write

Модуль ввода вывода .xyz файлов и настроек моделирования.

Функции/подпрограммы

• subroutine md read write::read integrator params (integr, file id)

Читает параметры интегратора.

• subroutine $md_read_write::read_box_size$ (box, filename)

Читает параметры моделируемой ячейки в файле .xyz. Читает второю строку в xyz файле. В размер ячейки задается тремя векторами. В общем случае ячейка триклинная.

• subroutine md read write::read particles (atoms, filename)

Читает информацию о частицах из .xyz файла. Первая строка файла содержит количество частиц. Третья и последующие - координаты по $X,\,Y,\,Z,\,$ скорости по $X,\,Y,\,Z,\,$ массу и название частицы. Всего 8 столбцов для каждой частицы.

• subroutine md_read_write::write_particle_group (filename, atoms, group, box)

Выводит информацию о группе частиц в новый файл.

• subroutine md_read_write::write_particle_group_append (filename, atoms, group, box, md_ ← step)

Выводит информацию о группе частиц в конец уже имеющегося файла.

7.19 Файл MOLECULAR DYNAMICS/md simulation.f90

Группы

• module md simulation

Функции/подпрограммы

• subroutine md_simulation::md (out_id, all_out_id, input_path, settings_filename, output_ continued prefix, out_period, num_of_omp_treads)

7.20 Файл MOLECULAR_DYNAMICS/perfomance_settings.f90

Группы

 $\bullet \ \ module \ performance_settings$

Модуль настройки OpenMP параллелизма.

Функции/подпрограммы

• subroutine perfomance_settings::set_openmp_perfomance (num_of_omp_treads, N)

Настраивает количество OpenMP потоков и omp_chunk_size.

Переменные

• integer perfomance_settings::omp_chunk_size

Массивы данных будут разбиваться на части длины omp_chunk_size при использовании omp
parallel for schedule(dynamic ,omp_chunk_size)

7.21 Файл runners/run gr analysis.f90

Функции/подпрограммы

• program run gr analysis

7.21.1 Функции/подпрограммы

```
7.21.1.1 \quad run\_gr\_analysis()
```

program run_gr_analysis ()

См. определение в файле run gr analysis.f90 строка 1
